

Step One: Problem Identification

< 0/1

In this subunit, you'll take an in-depth look at the first step in the data science method: **problem identification**. You've already worked on a unit about this step so we've kept this subunit brief; you'll find resources that will ensure you're set up with a solid foundation to work from as you work through the guided capstone project.

1 Guided Capstone - Step One

🕒 Students typically spend 1 - 2 Hours

You learned all about problem identification in the first technical unit of this course. If you'd like to review this topic before you get to work, [click here](#).

For the first step of this guided capstone, you'll fill out a problem statement worksheet based on what you learn by reading through this Big Mountain case study overview. This task is very similar to what you did when working through the Problem Identification unit — feel free to refer back to the resources contained in that unit if you need a refresher.

Submission Steps

1. Read these [project instructions](#).
2. Once you've finished your work, please submit it here and discuss it with your mentor during your next call.
Make sure your document share settings are set so that your mentor can view your work.

Paste URL(s) to your document(s):
